

We start to provide Magconn module.

By installing Magconn module, the battery products can use magnetic charging system.

What is Magconn?

Magconn is an advanced charging technology which is like a combination of wired and wireless. Magconn is entirely different from other charging technologies. Magconn enables highly efficient charging via the magnetic connector and the charging time is the same as from an OEM micro USB or Apple cable.

By simply connecting setting the device on a stand, pad, or cable-pad, charging can be performed as quickly as with an OEM micro USB or Apple cable.

How do you charge?

The 4 rings shown in this photo enable the charging process by connecting with a magnetic charger. The effect is the same as plugging in a cable, but it's much simpler and not fragile like mini-USB ports etc.
