

AsReader® GUN-Type Super-Long Range

Barcode

Introducing AsReader's Super-Long Distance Barcode Scanner!

Equipped with a 2D/1D-imager that features an auto-focus lens, this reader can read 38 types of 1D & 2D barcodes at both short and long distances: From 6 inches to 50 feet! (15 cm to 15 meters)* You can use it while riding a forklift, for picking or stock-taking, even in extremely large warehouses! Even in high density, this scanner's engine can read barcodes that are dirty or damaged. This makes it the perfect scanner to safely use in harsh scanning environments like distribution sites & factories.

Readable Barcodes

There are two types of connectors:
AsLock, a rotating lock that slides into a holder.
Magconn(PIN2), a powerful magnetic charging/data connection which works by placing the device on the scanner.

Since both are hard-wired connections, they are faster and more reliable than wireless systems. This solves the dilemma and annoyance of "pairing" with Bluetooth.

The main unit of the GUN-Type is suitable for long-range reading. Because the trigger is in the grip, and it utilizes a smartphone, it is extraordinarily user-friendly.

Increased efficiency as you scan both the sales slips in your hands and the cardboard boxes at the highest point on your warehouse racks. (Maximum longitudinal reading-angle is 8.7°.)

The high-performance imager can read in difficult conditions, even in both dimly-lit buildings and outdoors, on bright and sunny days, up to 100,000 lux!

* Scanning distance may vary based on conditions such as symbol length or type, scanning angle, printing accuracy, shading, ambient illumination, etc. Note: The aimer is a Class 2 Laser Light (CDRH Class II).
